Michael Rizzo

Python Automation and Applied AI

Davie, FL | m_rizzo@live.com

Portfolio | GitHub | LinkedIn

Professional Summary

Python automation professional with experience in automotive software workflows, web testing, Linux administration and computer repair. Builds applied AI portfolio projects with typed decisions, explicit human approval, reproducible tests and visible evaluation evidence.

Technical Skills

Python, Bash, JavaScript, FastAPI, Django, REST APIs, TypeSafe, Git, Jenkins, JFrog, Nexus, MongoDB, Jira, Confluence, Linux, systemd and software testing.

Professional Experience

Michael's Computer Repair Service | Owner and Technician | Oct 2008 - Present

- Diagnose, repair and upgrade Windows and macOS computers, including hardware replacement, malware removal and operating-system configuration.
- Build and rewire custom gaming PCs; refurbish laptops with RAM and SSD upgrades, clean installations and resale preparation.

Ford Motor Company | Actalent Consultant | Jun 2021 - May 2025

In House Hardware And Software Design | Automation Team

- Maintained Jenkins automation for software-set creation and deployment workflows across ECG, TCU and SYNC electronic control units, using JFrog, Nexus and MongoDB.
- Refactored a Python command-line tool to organize builds by branch and development, release or production type for software-set preparation.
- Built a Django lookup tool for software-set associations and Python scripts using the Confluence Cloud API to migrate wiki content.
- Debugged CI/CD scripts and tracked Jira workflows to support release preparation and issue traceability.

Chewy | Software Tester | Mar 2020 - Apr 2021

- Executed manual and scripted website tests using an internal scripting language; worked with other teams to investigate defects and validate changes.

Selected Engineering Projects

Public source code and interactive case studies are available through the portfolio links below.

Repair Shop Operations

- Implemented a FastAPI service using TypeSafe Choice and Noul judgments for fictional repair intake. Code enforces input limits, persistent usage budgets and approval tied to the current session and proposal.
- Published a frozen synthetic benchmark: 42 of 42 held-out workflow outcomes matched labels, versus 36 of 42 for a keyword baseline. Results cover simulated requests, not measured customer savings.

Marketplace Listing Analysis

- Separated target match, evidence and risk from full cost and margin calculations, with editable assumptions and integer-cent pricing for fictional listings.

Job Opportunity Ranking

- Built an editable keyword rubric over 12 sourced employer-posting snapshots, exposing fit dimensions, matched terms and original sources.

Historical Strategy Evaluation

- Audited a fixed ETH/USD strategy using 720 Kraken daily candles, a chronological holdout, execution costs and a buy-and-hold benchmark; exposed failed evidence gates.

Earlier Experience

Hughes | Help Desk Agent | Jun 2019 - Feb 2020

- Resolved and escalated enterprise and federal-client support requests using networking tools, ticketing systems and technical knowledge bases.

Cook Technologies | Field Technician | Sep 2018 - May 2019

- Installed switches, IT equipment and VoIP phones at retail and restaurant sites; terminated and tested Cat5/Cat6 cabling for point-of-sale and network devices.

South Coast Telecom | Linux System Admin Intern | Feb 2018 - May 2018

- Administered Linux and VoIP servers, configured SSH, Webmin, firewall rules and Nagios monitoring, and wrote Bash scripts to analyze call records.

Education

Bachelor of Science in Computational Science; Minor in Mathematics | Jun 2014

Associate of Arts in General Education | Florida Southwestern State College | May 2011

Additional Training

Udemy Python Developer and SoloLearn Python 3 certificates | Jul 2020
